1. Let $B = \{3, 5, 10, 11, 14\}$. Is the following statement true or false: $3 \notin B$

1 / 1 ponto

☒ False

☐ True

✓ Correto

The symbol \notin stands for "is not an element of." Since 3 is in an element of the set B , the given statement is not true.

2. Let $A = \{1, 3, 5\}$ and $B = \{3, 5, 10, 11, 14\}$. Which of the following sets is equal to the union $A \cup B$?

0 / 1 ponto

☐ $\{1, 10, 18\}$

☐ $\{3, 5, 10, 11, 14\}$

☐ $\{1, 3, 5, 10, 11, 14\}$

☒ $\{1, 3, 5, 3, 5, 10, 11, 14\}$

✗ Incorreto

An element is never listed more than once in a set. You may find the discussion of "The Inclusion-Exclusion Principle" in the Venn Diagrams video illuminating here!

3. How many real numbers are there between the integers 1 and 4?

1 / 1 ponto

- ☐ None
- ☐ 4
- ☐ 2
- ☒ Infinitely many

Correto

There are in fact infinitely many real numbers between any pair of distinct integers, or indeed any pair of distinct real numbers!

4. Suppose I tell you that x and y are two real numbers which make the statement $x \geq y$ true. Which pair of numbers **cannot** be values for x and y ?

1 / 1 ponto

- ☐ $x = 2$ and $y = 1$
- ☐ $x = 10$ and $y = 10$
- ☒ $x = -1$ and $y = 0$
- ☐ $x = 5$ and $y = 3.3$

Correto

Recall that the statement $x \geq y$ means that x is either equal to y or x is to the right of y on the real number line. Since -1 is actually to the left of 0 , these cannot be values for x and y .

5. Suppose that z and w are two positive numbers with $z < w$. Which of the following inequalities is false?

1 / 1 ponto

- ☐ $w - 7 > z - 7$

- ☐ $z + 3 < w + 3$
- ☒ $-5z < -5w$
- ☐ $-z > -w$

✓ **Correto**

If we start with $z < w$ and multiply both sides by -5 , we need to flip the less-than sign, which would give $-5z > -5w$. For an example, try $z = 1$ and $y = 2$ and see what happens!

6. Find the set of all x which solve the inequality $-2x + 5 \leq 7$

0 / 1 ponto

- ☐ $x \geq -1$
- ☐ $x \leq -1$
- ☐ $x \geq -6$
- ☒ $x = -1$

✗ **Incorreto**

To be fair, $x = -1$ does satisfy the given inequality, but there are infinitely many other numbers which do!

7. Which of the following real numbers is not in the closed interval $[2, 3]$

1 / 1 ponto

- ☒ 1
- ☐ 2.1
- ☐ 2
- ☐ 3

✓ **Correto**

Recall that the closed interval $[2, 3]$ consists of all real numbers x which satisfy $2 \leq x \leq 3$. Since $2 \leq 1$ is false, $1 \notin [2, 3]$

8. Which of the following intervals represents the set of all solutions to:

1 / 1 ponto

$$-5 \leq x + 2 < 10?$$

☐ $[-5, 10)$

☐ $(7, 8)$

☒ $[-7, 8)$

☐ $[-7, 8]$

✓ **Correto**

Subtracting 2 from all sides of the inequalities gives $-7 \leq x < 8$, and the set of all real numbers x which make that true is exactly the half-open interval $[-7, 8)$.

9. Which of the numbers below is equal to the following summation: $\sum_{k=2}^5 2k$?

1 / 1 ponto

☒ 28

☐ 4

☐ 14

☐ 10

✓ **Correto**

We compute $\sum_{k=2}^5 2k = 4 + 6 + 8 + 10 = 28$.

10. Suppose we already know that $\sum_{k=1}^{20} k = 210$. Which of the numbers below is equal to $\sum_{k=1}^{20} 2k$?

1 / 1 ponto

☐ 40

☐ 210

☒ 420

☐ 2 **Correto**

By applying one of our Sigma notation simplification rules, we can rewrite the summation in question as $2 (\sum_{k=1}^{20} k) = 2 \times 210 = 420$.

11. Which of the numbers below is equal to the summation $\sum_{i=2}^{10} 7$?

0 / 1 ponto☐ 48☐ 7☐ 63☒ 70 **Incorreto**

If you got here, you probably added up 10 copies of the number 7. But look at the bottom of the Sigma symbol!

12. Which of the following numbers is the variance of the set $Z = \{-2, 4, 7\}$?

1 / 1 ponto☐ 42☒ 14☐ $\sqrt{14}$ ☐ 69 **Correto**

To get the variance of a set of numbers, you need to perform four steps:

First compute the mean (which is 3)

Then calculate all the squared differences between the numbers in the set and this mean (here you get 25, 1, 16)

Then add all these up (here you get 42)

Then divide by the number of elements in the set (which is 3).

Therefore, the variance of Z

$$= \frac{1}{3} [(-2-3)^2 + (4-3)^2 + (7-3)^2]$$

$$= \frac{1}{3} [25 + 1 + 16] = \frac{42}{3} = 14$$

13. Which of the following sets does *not* have zero variance? (hint: don't do any calculation here, just think!)

1 / 1 ponto

- ☐ {0, 0, 0, 0, 0, 0, 0}
- ☐ {1, 1, 1, 1}
- ☒ {2, 5, 9, 13}
- ☐ {5, 5, 5, 5, 5, 5, 5, 5, 5, 5, 5, 5, 5, 5, 5}

Correto

Intuitively, the numbers in this set are spread out.
